

DUEX® PERIMETER MESH PANELS

SPECIFICATION SHEET

Duex® perimeter fencing has traditionally been used in sports environments but its rigid construction and low aesthetic environmental impact means it is equally effective for perimeter protection and demarcation of both public and private sector buildings.

The 6mm vertical wire sandwiched between two 8mm(nom.) horizontal wires, ensures that the heavy duty panels are extremely resistant to vandalism. Duex® 868 is available in a range of heights with gates available to suit. Where a lighter protection is acceptable or budget constraints are tighter Duex® is also available as a 6mm/5mm/6mm nominal configuration.

Suitable for :

- Running Tracks
- Schools
- Amenity Areas
- Commercial Business
- New House Building
- Retail Outlets

Features:

- Available from stock
- Security Fixings
- Rigid Double Wire Design
- Suitable for many applications
- Polyester Powder Coated to a choice of colours
