

SPRING GRIP WIRE STRAINER

SPECIFICATION SHEET

3 YEAR WARRANTY
PATENTED TECHNOLOGY
 EST 2005

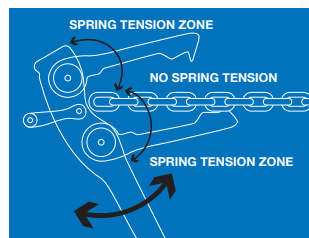

Easier to use! The only wire strainer with a built in Tension Gauge. The spring grip wire strainer is packed with features to help make light work out of your day to day jobs. Watch our video below to see for yourself the ease of operation this strainer delivers.

Features

- Spring operated cam and anvil means it won't fall off, slip or jam. The hardened steel jaws suits all fencing wire but is the only strainer designed specifically for high tensile wire.
- Built in tension gauge – measures every time you strain. By not overstraining the wire, its strength and integrity is preserved.
- Chain guide prevents chain falling out of pawls and is safer for fingers in use.
- 3m chain length – strain to a strainer post, strain more than 200m, strain 400m of sheep mesh and gives you more room to tie off.
- Independent pawl springs walk forward automatically for hands free operation. Once tied off the chain detaches easily from the pawls. It's easy to load and springs are out of the way.

Specifications

- Max rated loading – 400kg
- Coating – zinc plated
- Shipping weight – 4.3kg
- Spring cycles gauge – 350,000
- Chain guide – gravity fed
- Chain length – 3m

1. CAM & ANVIL

- Spring Operated - won't fall off
- Doesn't slip or jam
- Smooth grip
- Self location on barb wire
- Hardened steel jaws
- Strainer designed
- Suits all fencing wire
- The only strainer designed specifically for high tensile wire.

2. TENSION GAUGE

- Built in tension gauge - measures every time you strain
- By not overstraining the wire, its strength and integrity is preserved
- Plunger slides inside outer barrel as tension increases
- The gauge is a swivel for left hand use
- Accurate and clear to see

3. CHAIN GUIDE

- Prevents chain falling out of pawls
- Chain guides into pawls when backing off, safer for fingers
- Gravity feed - keeps chain out of the way

4. CHAIN LENGTH

- Strain to a strainer post
- Strain more than 200m
- Strain 400m of sheep mesh
- Keep wire strainer clearer of end assembly
- Gives you more room to tie off

5. PAWL SPRINGS

- 2 independent pawl springs
- Pawl walks forward automatically for hands-free operation
- Once tied off - chain detaches easily from pawls
- Springs are out of the way
- Easy to load
